DIGITAL FOOTPRINT INTELLIGENCE

Discover Your Digital Presence. Understand Your Risks. Take Control.

Assessment ID:	DFI-SEC-1	**Risk Rating:**	**MODERATE (28/100)**
Target Evaluated:	Digital Privacy Questionnaire Profile	**Scan Timestamp:**	2026-11-11 16:52:57 UTC
Assessment Mode:	Mode B: Digital Privacy Questionnaire	**Breach Matches:**	**0**

Security Category Breakdown (Mode B Assessment)

Category	Risk Score (0-100)	Posture
Authentication	**30/100**	Moderate Risk
Social & Privacy	**28/100**	Moderate Risk
Device & Apps	**29/100**	Moderate Risk
Browsing & Phishing	**25/100**	Hardened
Network	**30/100**	Moderate Risk

Prioritized Security Recommendations

Priority	Security Objective & Action Steps
MEDIUM	**Deploy Tracker and Fingerprint Defenses** (Browsing) Advertising networks construct behavioral dossiers by tracking your browsing history across thousands of websites. **Implementation Steps:** • 1. Install the uBlock Origin browser extension to block ad networks, tracking telemetry, and malicious domains. • 2. Enable Strict Tracking Protection in Firefox, or use Brave / LibreWolf for everyday web browsing. • 3. Configure Encrypted DNS (DoH) using Cloudflare (1.1.1.1) or Quad9 (9.9.9.9) in browser network settings. • 4. Periodically clear third-party cookies and local storage.
CRITICAL	**Activate App-Based Two-Factor Authentication (2FA)** (Authentication) Passwords alone are vulnerable to breaches, phishing, and malware. 2FA stops 99% of automated account takeover attempts. **Implementation Steps:** • 1. Download an open-source authenticator app like Aegis Authenticator (Android) or 2FAS / Ente Auth (iOS/Android). • 2. Go into account Security Settings for your primary email, banking, and social profiles. • 3. Select 'Two-Factor Authentication' and scan the QR code using your authenticator app. • 4. Securely download and store your single-use recovery / backup codes in your encrypted vault.

HIGH	**Adopt a Dedicated Password Manager** (Authentication) Human memory cannot securely maintain unique, high-entropy 16+ character passwords across dozens of modern online services. **Implementation Steps:** • 1. Select an audited, open-source or end-to-end encrypted password manager (e.g. Bitwarden, 1Password, KeePassXC). • 2. Create a strong, memorable Master Passphrase (e.g., 4 or 5 random words joined by spaces or hyphens). • 3. Migrate existing browser-saved passwords into the encrypted vault. • 4. Enable browser and mobile auto-fill to protect against phishing lookalike domains.
