DIGITAL FOOTPRINT INTELLIGENCE

Discover Your Digital Presence. Understand Your Risks. Take Control.

Assessment ID:	DFI-SEC-2	**Risk Rating:**	**HIGH (63/100)**
Target Evaluated:	gautam777@gmail.com	**Scan Timestamp:**	2026-11-11 12:06:33 UTC
Assessment Mode:	Mode A: Email Footprint	**Breach Matches:**	**15**

Verified Data Breach Intelligence (XposedOrNot Verified Index)

Breach Entity	Year	Exposed Data Classes	Password Risk
AlienStealerLogs	2025	Email addresses;Passwords	Plaintext
Shein shein.com	2018	Email addresses;Passwords	Plaintext
Alleged-SOCRadar	2024	Email addresses	Unknown
Indiamart indiamart.com	2021	Names;Email addresses;Physical addresses;Phone numbers	Unknown
Twitter-Scraped twitter.com	2021	Usernames;Email addresses;Names;Geographic locations;Profile photos;Phone numbers	Unknown
BigBasket bigbasket.com	2020	Names;Dates of birth;IP addresses;Email addresses;Physical addresses;Passwords;Phone numbers	Easytocrack
Nitro gonitro.com	2020	Names;Passwords;Email addresses	Hardtocrack
Cit0day cit0day.in	2020	Email addresses;Passwords	Plaintext
Sonicbids sonicbids.com	2019	Usernames;Email addresses;Passwords;Names	Hardtocrack
MindJolt mindjolt.com	2019	Email addresses;Names;Dates of birth	Unknown
MyHeritage myheritage.com	2017	Email addresses;Passwords	Easytocrack
Digimon digimon.co.in	2016	Email addresses;Geographic locations;IP addresses;Names	Unknown

Prioritized Security Recommendations

Priority	Security Objective & Action Steps

CRITICAL	**Reset Passwords for All Breached Services** (Authentication) Your email address was identified in known public data breaches. Exposed credentials allow automated credential stuffing attacks. **Implementation Steps:** • 1. Identify each breached service listed in your scan results. • 2. Navigate to each service website directly (never click password reset links in emails). • 3. Change the account password to a completely unique, 16+ character password. • 4. If you used that same password on any other service, change those immediately as well.
HIGH	**Remove Personal Data from Data Broker Directories** (Identity) Data aggregators compile public records, consumer purchases, and breach dumps into searchable personal background dossiers. **Implementation Steps:** • 1. Search your name and phone number on Google inside quotes (e.g., "Firstname Lastname" "City"). • 2. Submit opt-out removal requests to major data aggregators (Radaris, Whitepages, Spokeo, FastPeopleSearch). • 3. Consider automated removal tools (DeleteMe, Incogni) if manual opt-outs are too time-consuming. • 4. Set up a Google Alert for your full name and primary email address.
MEDIUM	**Implement Email Masking and Aliases** (Identity) Using a single personal email everywhere links all your online activities into a unified target for breaches and spammers. **Implementation Steps:** • 1. Use an email masking service like SimpleLogin, Addy.io, or Apple Hide My Email. • 2. Generate a unique email alias for each newsletter, e-commerce store, and secondary site. • 3. If an alias appears in a spam blast or breach, simply disable that alias without changing your real email. • 4. Reserve your primary clean email exclusively for banking, government, and close personal contacts.
CRITICAL	**Activate App-Based Two-Factor Authentication (2FA)** (Authentication) Passwords alone are vulnerable to breaches, phishing, and malware. 2FA stops 99% of automated account takeover attempts. **Implementation Steps:** • 1. Download an open-source authenticator app like Aegis Authenticator (Android) or 2FAS / Ente Auth (iOS/Android). • 2. Go into account Security Settings for your primary email, banking, and social profiles. • 3. Select 'Two-Factor Authentication' and scan the QR code using your authenticator app. • 4. Securely download and store your single-use recovery / backup codes in your encrypted vault.
HIGH	**Adopt a Dedicated Password Manager** (Authentication) Human memory cannot securely maintain unique, high-entropy 16+ character passwords across dozens of modern online services. **Implementation Steps:** • 1. Select an audited, open-source or end-to-end encrypted password manager (e.g. Bitwarden, 1Password, KeePassXC). • 2. Create a strong, memorable Master Passphrase (e.g., 4 or 5 random words joined by spaces or hyphens). • 3. Migrate existing browser-saved passwords into the encrypted vault. • 4. Enable browser and mobile auto-fill to protect against phishing lookalike domains.
