DIGITAL FOOTPRINT INTELLIGENCE

Discover Your Digital Presence. Understand Your Risks. Take Control.

Assessment ID:	DFI-SEC-4	**Risk Rating:**	**LOW RISK (0/100)**
Target Evaluated:	bhoomisingh94103@gmail.com	**Scan Timestamp:**	2026-11-11 13:40:07 UTC
Assessment Mode:	Mode A: Email Footprint	**Breach Matches:**	**0**

Verified Data Breach Intelligence (XposedOrNot Verified Index)

No public breach records found: Your email address was not identified in any known data dumps indexed by XposedOrNot.

Prioritized Security Recommendations

Priority	Security Objective & Action Steps
MEDIUM	**Implement Email Masking and Aliases** (Identity) Using a single personal email everywhere links all your online activities into a unified target for breaches and spammers. **Implementation Steps:** • 1. Use an email masking service like SimpleLogin, Addy.io, or Apple Hide My Email. • 2. Generate a unique email alias for each newsletter, e-commerce store, and secondary site. • 3. If an alias appears in a spam blast or breach, simply disable that alias without changing your real email. • 4. Reserve your primary clean email exclusively for banking, government, and close personal contacts.
CRITICAL	**Activate App-Based Two-Factor Authentication (2FA)** (Authentication) Passwords alone are vulnerable to breaches, phishing, and malware. 2FA stops 99% of automated account takeover attempts. **Implementation Steps:** • 1. Download an open-source authenticator app like Aegis Authenticator (Android) or 2FAS / Ente Auth (iOS/Android). • 2. Go into account Security Settings for your primary email, banking, and social profiles. • 3. Select 'Two-Factor Authentication' and scan the QR code using your authenticator app. • 4. Securely download and store your single-use recovery / backup codes in your encrypted vault.
HIGH	**Adopt a Dedicated Password Manager** (Authentication) Human memory cannot securely maintain unique, high-entropy 16+ character passwords across dozens of modern online services. **Implementation Steps:** • 1. Select an audited, open-source or end-to-end encrypted password manager (e.g. Bitwarden, 1Password, KeePassXC). • 2. Create a strong, memorable Master Passphrase (e.g., 4 or 5 random words joined by spaces or hyphens). • 3. Migrate existing browser-saved passwords into the encrypted vault. • 4. Enable browser and mobile auto-fill to protect against phishing lookalike domains.
