DIGITAL FOOTPRINT INTELLIGENCE

Discover Your Digital Presence. Understand Your Risks. Take Control.

Assessment ID:	DFI-SEC-8	**Risk Rating:**	**MODERATE (37/100)**
Target Evaluated:	itsme225566@gmail.com	**Scan Timestamp:**	2026-11-11 14:10:03 UTC
Assessment Mode:	Mode A: Email Footprint	**Breach Matches:**	**2**

Verified Data Breach Intelligence (XposedOrNot Verified Index)

Breach Entity	Year	Exposed Data Classes	Password Risk
1Win 1win.com	2024	Email addresses;Dates of birth;Passwords;Phone numbers;IP addresses;Geographic locations	Hardtocrack
CutoutPro cutout.pro	2024	Names;Passwords;Email addresses;IP addresses	Easytocrack

Prioritized Security Recommendations

Priority	Security Objective & Action Steps
CRITICAL	**Reset Passwords for All Breached Services** (Authentication) Your email address was identified in known public data breaches. Exposed credentials allow automated credential stuffing attacks. **Implementation Steps:** • 1. Identify each breached service listed in your scan results. • 2. Navigate to each service website directly (never click password reset links in emails). • 3. Change the account password to a completely unique, 16+ character password. • 4. If you used that same password on any other service, change those immediately as well.
CRITICAL	**Activate App-Based Two-Factor Authentication (2FA)** (Authentication) Passwords alone are vulnerable to breaches, phishing, and malware. 2FA stops 99% of automated account takeover attempts. **Implementation Steps:** • 1. Download an open-source authenticator app like Aegis Authenticator (Android) or 2FAS / Ente Auth (iOS/Android). • 2. Go into account Security Settings for your primary email, banking, and social profiles. • 3. Select 'Two-Factor Authentication' and scan the QR code using your authenticator app. • 4. Securely download and store your single-use recovery / backup codes in your encrypted vault.

HIGH	**Adopt a Dedicated Password Manager** (Authentication) Human memory cannot securely maintain unique, high-entropy 16+ character passwords across dozens of modern online services. **Implementation Steps:** • 1. Select an audited, open-source or end-to-end encrypted password manager (e.g. Bitwarden, 1Password, KeePassXC). • 2. Create a strong, memorable Master Passphrase (e.g., 4 or 5 random words joined by spaces or hyphens). • 3. Migrate existing browser-saved passwords into the encrypted vault. • 4. Enable browser and mobile auto-fill to protect against phishing lookalike domains.
